

PRASHANT SAXENA

**AWS Cloud Architect |
DevSecOps Architect**

Noida, India

+91 8470819401

prashant.aiarchitect@gmail.com

www.linkedin.com/in/prashant-saxena-1416b413

SKILLS

- AWS (EC2, ECS, EKS, VPC, IAM)
- S3, Lambda/ Lambda Automation, RDS, SQS, SNS, CloudFront, API Gateway
- ECR, CI/CD, Git, GitHub
- Terraform, Docker, Kubernetes
- Python, Bash Scripting, AWS CLI
- Prometheus, Grafana
- CloudWatch, Cost Optimization
- Enterprise AI Governance: Security Boundaries, Guardrails, Cost Controls
- React, JavaScript, Typescript, ES6, Postman, NodeJS

AWS Cloud Architect | DevOps & DevSecOps | Microservices | Kubernetes(EKS) | Terraform

19 Years IT | 9 Years AWS/Cloud/DevOps/DevSecOps

PROFESSIONAL SUMMARY

Results-driven AWS Cloud and DevOps professional with 19 years of IT experience, including extensive experience in cloud architecture, infrastructure automation, container platforms, application modernization, and enterprise technology delivery.

Experienced in designing secure, resilient, scalable, and cost-optimized AWS architectures using services including Amazon VPC, EC2, ECS, EKS, ECR, IAM, Lambda, API Gateway, ALB, RDS, DynamoDB, S3, SQS, SNS, CloudFront, Route 53, and CloudWatch.

Strong understanding of microservices architecture, Docker containerization, Kubernetes workload management, Infrastructure as Code using Terraform, and CI/CD automation using GitHub Actions. Knowledge of pull-request-based development, automated quality gates, security scanning, container image security, environment-specific deployments, and controlled promotion across development, QA, and production environments.

Experienced in applying AWS Well-Architected Framework principles across security, reliability, performance efficiency, cost optimization, operational excellence, and sustainability. Strong focus on enterprise cloud governance, observability, disaster recovery, identity and access management, platform security, and automation.

CORE CLOUD, DEVOPS & DEVSECOPS SKILLS

- **AWS Cloud:** Amazon VPC, EC2, ECS, EKS, ECR, IAM, Lambda, API Gateway, ALB, Route 53, CloudFront, S3, RDS/Aurora, DynamoDB, SQS, SNS, Step Functions and CloudWatch.
- **Microservices Architecture:** Domain-aligned services, independently deployable components, API-based communication, database-per-service concepts, asynchronous messaging, service decoupling, fault isolation, scalability and resiliency.
- **Containers and Kubernetes:** Docker, container image lifecycle, Amazon ECR, Amazon ECS, AWS Fargate, Amazon EKS, Kubernetes Deployments, Services, Ingress, ConfigMaps, Secrets, namespaces, autoscaling, rolling deployments and workload isolation.
- **Infrastructure as Code:** Terraform modules, remote state management, environment-specific configurations, reusable infrastructure components, Terraform plan and apply workflows.
- **CI/CD and Source Control:** Git, GitHub, GitHub Actions, feature branches, pull requests, branch protection, peer review, automated validation, artifact

- REST, JSON

- MongoDB, DynamoDB

- Linux

- HTML5, CSS3, SAAS, Bootstrap, Material

- UX Design (Figma), Photoshop

- Responsive Web Design

versioning and environment promotion.

- **DevSecOps:** Gitleaks, Bandit, Ruff, pytest, coverage validation, pip-audit, Checkov, SonarCloud, dependency scanning, static application security testing, Infrastructure as Code scanning and quality gates.

- **Container Security:** Docker image scanning, Trivy, CVE assessment, SBOM concepts, image tagging, immutable image references, SHA digests, vulnerability severity classification and remediation tracking.

- **Cloud Security:** IAM least privilege, role-based access, temporary credentials, GitHub Actions OIDC federation, encryption, security groups, private subnets, secrets management, audit logging and security governance.

- **Monitoring and Observability:** Amazon CloudWatch, centralized logging, metrics, alarms, dashboards, Prometheus, Grafana, application health monitoring and incident response.

- **Resilience and Disaster Recovery:** Multi-AZ architectures, backup and restore, cross-region disaster recovery concepts, health checks, failover planning, defined RTO and RPO.

- **Programming and Automation:** Python, Bash scripting, AWS CLI, YAML, JSON and REST APIs.

- **GenAI and Agentic AI:** Amazon Bedrock, RAG, Knowledge Bases, vector search, AI agents, tool integration, orchestration workflows, guardrails and enterprise AI governance.

EXPERIENCE

Coforge Ltd – Greater Noida | Senior AWS Cloud Architect | 2015 – Present

- Architected and delivered enterprise-scale AWS cloud solutions using Amazon VPC, EC2, ECS, EKS, IAM, ALB, Route53, CloudFront, S3, RDS, Lambda, API Gateway, SQS and SNS for highly available and secure business-critical applications.
- Designed multi-account AWS environments with network segmentation, IAM least-privilege controls, security groups, private/public subnet architectures, and centralized governance following AWS Well-Architected Framework principles.
- Led cloud modernization and containerization initiatives by migrating traditional applications to Docker-based microservices deployed on Amazon ECS and Amazon EKS, improving scalability, deployment agility, and operational efficiency.
- Designed and implemented Infrastructure as Code (IaC) using Terraform for automated provisioning of VPCs, EKS clusters, ECS services, IAM roles, security controls, RDS databases, and networking components across multiple environments.
- Built enterprise CI/CD pipelines integrating Git repositories, automated testing, container image creation, Amazon ECR, and deployment automation for development, UAT, and production environments.

- Defined cloud architecture standards covering security, availability, disaster recovery, monitoring, observability, backup strategies, and operational governance.
- Implemented centralized monitoring and observability using Amazon CloudWatch, Prometheus, Grafana, dashboards, alarms, log aggregation, and proactive alerting to improve platform reliability and incident response.
- Led AWS cost optimization initiatives through resource right-sizing, Reserved Instance planning, storage optimization, budget controls, utilization analysis, and governance reviews.
- Designed highly available database architectures using Amazon RDS with Multi-AZ deployments, automated backups, encryption, performance monitoring, and disaster recovery considerations.
- Provided architecture leadership for Kubernetes-based platforms including cluster design, ingress management, autoscaling, workload isolation, namespace governance, and production operations.
- Designed secure event-driven architectures using Lambda, API Gateway, SQS and SNS for workflow automation, application integrations, and operational processes.
- Architected enterprise GenAI and Agentic AI platforms on AWS leveraging Amazon Bedrock, RAG architectures, Knowledge Bases, vector search, orchestration workflows, and enterprise security controls.
- Defined governance models for GenAI adoption including IAM boundaries, private VPC connectivity, data access controls, model evaluation, cost monitoring, guardrails, and responsible AI practices.
- Partnered with business stakeholders, development teams, DevOps engineers, and leadership teams to translate business requirements into scalable cloud-native architecture solutions.

Boutique International Pvt. Ltd – Noida | Senior UI Developer | Apr 2012 – Mar 2015

- Owned complete UI delivery lifecycle including wireframes, prototypes and responsive layouts.
- Converted PSD designs into high-performance HTML/CSS/JavaScript applications.
- Collaborated closely with backend and QA teams for production releases.

Wizie– Gurugram | Web Designer | Aug 2006 – Dec 2011

- Converted PSD designs into pixel-perfect, cross-browser HTML/CSS layouts.
- Developed interactive UI using JavaScript and jQuery.
- Designed and delivered 50+ websites across multiple domains.
- Created logos, banners, flyers and print creatives; interacted directly with clients.

KEY AWS PROJECTS

Enterprise Multi-Tenant SaaS Control Plane on AWS

- Architected a multi-tenant SaaS control plane supporting tenant onboarding,

user and service-account lifecycle, subscription entitlements, resource provisioning, and secure tenant isolation.

- Developed Python-based REST APIs and containerized backend services deployed on AWS ECS/EKS using Docker, Kubernetes, and Amazon ECR.
- Integrated Amazon Cognito, OAuth 2.0, OIDC, JWT, and RBAC for authentication, tenant-aware authorization, and secure API access.
- Designed API management and resilient event-driven workflows using API Gateway, Lambda, SQS, and SNS, incorporating request validation, throttling, retries, idempotency, and failure handling.
- Implemented tenant-level usage metering and analytics to support subscription enforcement, operational reporting, and downstream billing integration.
- Integrated RDS/Aurora, Secrets Manager, and CloudWatch for secure data management, structured logging, metrics, distributed tracing, dashboards, and proactive alerting.
- Automated infrastructure and application delivery using Terraform, GitHub Actions, Docker, CI/CD, security scanning, and GitHub OIDC-based temporary AWS credentials.
- Led cloud-native engineering standards and AI-assisted development practices while mentoring engineers and maintaining ADRs, API contracts, operational runbooks, and troubleshooting procedures.

Technology Stack: Python, AWS ECS, EKS, Lambda, API Gateway, Cognito, RDS/Aurora, SQS, SNS, Secrets Manager, CloudWatch, IAM, ECR, Docker, Kubernetes, Terraform, GitHub Actions, OAuth 2.0, OIDC, JWT, REST APIs

Enterprise AWS Microservices Platform (ECS, Lambda, RDS, Terraform)

- Designed and implemented a cloud-native microservices platform on Amazon ECS supporting multiple business applications and APIs.
- Architected container lifecycle management using Docker, Amazon ECR, ECS Services, Application Load Balancers, and Auto Scaling.
- Implemented Infrastructure as Code using Terraform to automate provisioning of VPCs, ECS clusters, IAM roles, networking, security groups, and supporting AWS services.
- Designed event-driven integrations using Lambda, SQS and SNS enabling asynchronous processing and improved system scalability.
- Integrated Amazon RDS as backend data layer with automated backup, monitoring, encryption, and high availability configurations.
- Established CI/CD automation with Git-based workflows enabling rapid, reliable, and repeatable deployments across environments.
- Implemented centralized logging, monitoring, alerting and operational dashboards using CloudWatch for production support and incident management.
- Drove cloud security, governance, and cost optimization practices resulting in improved operational efficiency and reduced cloud expenditure.

Technology Stack: AWS ECS, Docker, Terraform, Lambda, RDS, SQS, SNS, CloudWatch, IAM, ALB, ECR, Git, CI/CD

CloudNova – Production EKS Platform (EKS, Kubernetes, Terraform)

- Architected and deployed production-grade Kubernetes platform on Amazon EKS for hosting containerized enterprise workloads.
- Designed complete AWS infrastructure using Terraform including VPC, private/public subnets, NAT Gateways, IAM roles, security groups, EKS cluster, node groups and supporting services.
- Implemented Kubernetes workload deployment strategies including namespaces, ingress controllers, autoscaling, rolling updates and high-availability architecture.
- Established enterprise monitoring and observability using Prometheus, Grafana and CloudWatch with real-time dashboards, metrics collection and alerting mechanisms.
- Enabled secure application connectivity through IAM Roles for Service Accounts (IRSA), private networking, and least-privilege access principles. Managed application deployment lifecycle through automated CI/CD processes integrated with container image repositories and Kubernetes deployment workflows.
- Designed platform operational standards covering reliability, scalability, monitoring, security, and disaster recovery readiness.
- Collaborated with development and operations teams to onboard applications onto Kubernetes and drive cloud-native adoption.

Technology Stack: AWS EKS, Kubernetes, Terraform, EC2, VPC, IAM, ALB, ECR, Prometheus, Grafana, CloudWatch, Docker, GitHub Actions

EDUCATION & CERTIFICATIONS

- Bachelor in Art from Jiwaji University, Gwalior – 2003
- e-DAST (Diploma in Advanced Software Technology) – CMC Ltd
